

digInvoice

Say goodbye to treating your suppliers
paper invoices

digInvoice

- Do you still waste time processing your suppliers' paper invoices?
- Do you need to streamline the process for collecting data from invoices so that they can be integrated into your management system?
- Are you unable to obtain all of your suppliers' invoices electronically?
- Would you like to shorten your invoice processing cycles?

YET digInvoice is the solution you need to make the processing of all the paper invoices you receive much more efficient.

This service speeds up the entire invoice processing cycle, automatically extracting all the necessary data and making them available for processing in the same way as an invoice received via Electronic Transactions.

This service offers the following features:

- Centralised postal receipt of paper invoices (Full Capture only) or in digital format (Quick Capture only)
- Digitalisation of documents (Full Capture only)
- Data extraction
- Quality Control
- Documents available in PDF and XML via Electronic Transaction service
- Storage of the documents or dispatch of same to the customer (Full Capture only)

Guaranteed automatic reading of data in around 98% of invoices; YET digInvoice reduces the need for manual data inputting, reducing errors and costs, and ensuring a return on your investment. Maintenance costs are almost non-existent since powerful rules are used that ensure the correct analysis and extraction of data from the invoices. The impact in terms of changes to document layout or the creation of new suppliers is practically nil.

YET digInvoice is available in two configurations:

YET Full Capture – an extended service for the processing of paper invoices
 Ideal for those who want to centralise the automatic processing of paper invoices by digitalising them and extracting the data they contain

YET Quick Capture – data extraction from invoices in digital format
 The best choice for those who are able to digitalise documents in-house or who receive many documents in unstructured digital format and simply want to extract and process the data they contain.

Functional Differences

Quick Capture	Full Capture	
	👍	Centralised postal receipt of paper invoices
👍		Centralised receipt of invoices in digital format (e-mail or ftp)
	👍	Digitalisation of data
👍	👍	Data extraction
👍	👍	Quality Control
👍	👍	Documents available via Electronic Transaction service
	👍	Storage of the documents or dispatch of same to the customer
